Specifically, FRATTINI *et al.* fails to teach or suggest the claimed flow diverter assembly having a spring biased movable member capable of operating in a bypass (first) position to establish fluid flow with a fuel pool and an engaged (second) position to establish fluid flow with a filter and pump assembly (as in original independent claims 1, 5 and 25), or a flow diverter assembly with a fixed outer member with bypass and engaged position windows and spring biased movable member having windows configured such that the flow diverter is capable of operating in a bypass (first) position and an engaged (second) position such that the windows align to provide bypass and engaged fluid flow in the respective positions (as in original independent claim 13). For at least the foregoing reasons, the claims believed to recite patentable subject matter.
